

Have you been diagnosed with COVID-19 and have recently recovered? Do you want to learn your immune response to the infection?

Please contact us at info@symbioticainc.com.

We are actively doing studies to improve and provide more COVID-19 testing, including learning about how recovered COVID-19 patients are developing an immune response. Your sample is valuable and can provide the means to bring better access for others and more information in understanding the infection.

What's the process?

1. We will ask you to review and sign our study consent form; and, provide a copy of your positive COVID-19 test results.
2. We will send you an at-home, self-collection kit for a finger-prick sample.
*The kit will include everything you will need to collect your sample, including an instruction sheet and a pre-paid mailer to return it to us using any USPS drop box.

What do you get for participating?

We will test your sample when it arrives at our lab and can return your results within 2-4 days of receiving your sample; but we must stipulate, **this is for research purposes only**. It does not cost you anything to participate in this study. We cannot offer you anything like a monetary incentive / gift to participate because joining the study must be purely voluntary for ethical reasons.

What are we testing?

We have a serological test exclusively for the detection of IgG antibodies to COVID-19. IgG is most abundantly produced in response to an antigen and will be maintained in the body after initial exposure for long term response. This test is dependent on the body developing a response to the virus.

We are using an EUA-approved test with sensitivity of 90% and specificity of 100%.
